

Homework 9.

Luis Daniel Medina Cazarez A01651070

Using indico's personality API, I extracted for new features, they are: extraversion, openness, agreeableness and conscientiousness. With this new feature, we can see a small different between classes:

For this homework they were used the next classifiers:

Multiclass classifier:

[MulticlassClassifier.csv](#)

5 hours ago by [Daniel](#)

[add submission details](#)

0.23600

LWL:

[LWL.csv](#)

[add submission details](#)

0.27600

Naive Bayes Updateable:

[NaiveBayesUpdateable1.csv](#)

4 hours ago by [Daniel](#)

[add submission details](#)

0.28399

The last one was the better one. With 0.283, there were other submission but they have less accuracy. For the next steps I am going to try deleting some feature and see what happen. For this practice I did it but the accuracy was worse.
